

# Android - HelloWorld (Fullscreen)

- Simple "Hello World" - runs in full screen
- Similar to declarative version of "Hello World"
- Full screen is enabled using `requestWindowFeature()`
  - `Window.FEATURE_NO_TITLE` - hides the title bar
  - `requestWindowFeature(Window.FEATURE_NO_TITLE);`

"Hello World" is displayed at the center of the screen; but the title bar is hidden in this full screen version of Hello World

The application partially works when cross-compiled with XMLVM. The title bar is not hidden.
