

Android – Immersive Mode

- Immersive mode was added in API level 19.
- Allows application to take over the complete screen-real-estate.
- Useful for games and e-book applications.

Anthony: please take two portrait-screenshots with and without system UI

~~"Hello World" is displayed at the center of the screen; but the title bar is hidden in this full screen version of Hello World~~

~~The application partially works when cross-compiled with XMLVM. The title bar is not hidden.~~
