

Android – Layout (relative)

- Shows use of RelativeLayout for portrait and landscape mode
- Displays five buttons – stretched to make use of width and height of the display for landscape and portrait
- Only one layout resource is used:
 - Res/layout/main.xml
- RelativeLayout – arranged its children relative to each other based on given rules
- Layout parameters of children – buttons are specific to layout container – RelativeLayout

- The buttons are stretched to make use of width and height of the display
- The buttons are placed relative to each other

Exercise

- Remove button “2” from the application and change the properties of button “1” so that this button will be stretched along the width of the screen (similar to button “3”)
