

Android - List

- Application to demonstrate `ListActivity` that displays items as a vertical list
- List item can be an arbitrary view (here, `TextView`)
- The main activity is derived from `ListActivity`
- `ArrayAdapter` can be used to fill the `ListActivity` with values
- The `ArrayAdapter` needs
 - Resource ID for a layout file containing a `TextView`
 - Objects - String array with values to be shown
- `getListView()`
 - Used to retrieve the `ListView`

- A click listener is set which will be invoked when an item is selected
- `onItemClick()`
 - Callback invoked when item is selected

```
onItemClick (AdapterView<?>  
parent,
```

```
View view,  
int position,  
long id)
```

Row ID of the
item that was
clicked

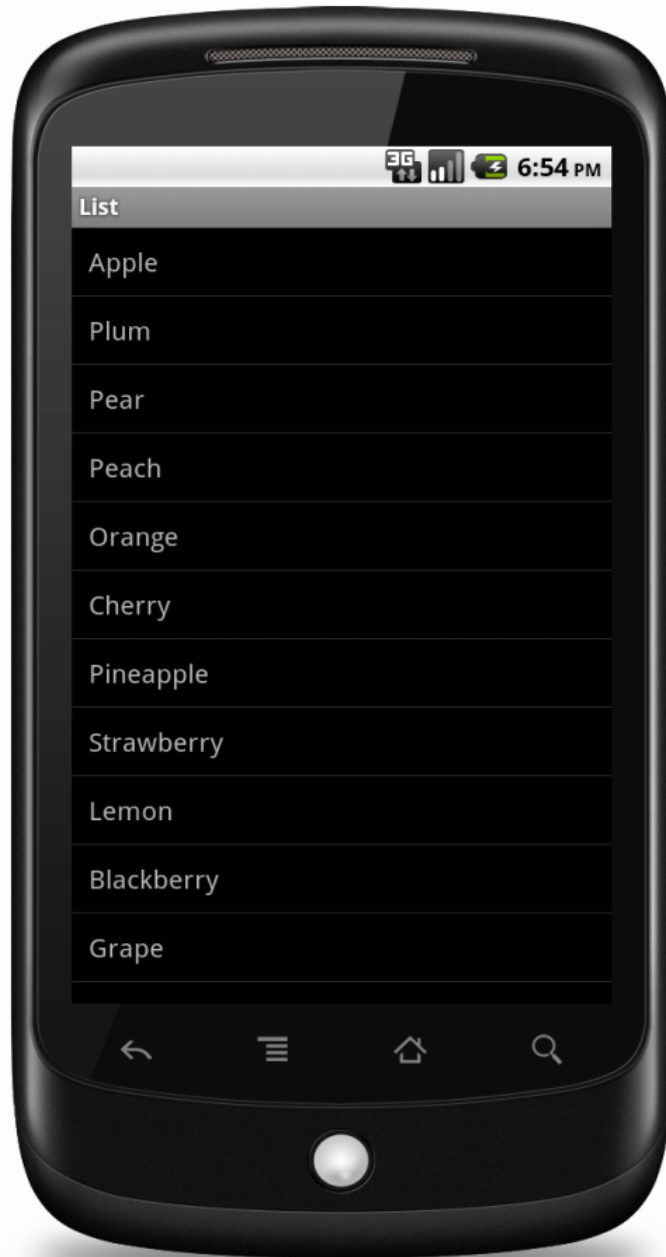

Position of the
view in the
adapter

AdapterView
where the click
happened

View within the
AdapterView
that was clicked

- A list item here, is a `TextView` showing one of several fruit names hardcoded into the application
- Whenever an item of the `ListActivity` is selected, an `AlertDialog` is shown with the item that was selected
