## Android - Storage

- This tutorial shows four different ways of making data persistent in an Android app.
- This app has no visual component. It only prints out some logs.
- The four persistency methods are:
  - Shared Preferences
  - Writing to external storage
  - SQL database
  - Using Parse.com cloud service

## References

- Data storage
- Parse.com cloud service

## Exercise

- Use Shared Preferences to Log.d() a text only when the application is launched for the very first time.
- Change the schema of the Employee record for the SQL and Cloud examples by adding a new field for gender.
